

ISS Research Capability for Hosting Space Science Instruments

2022 HE22 SMEX and MO Pre-proposal Conference
Oct 6, 2022

Steve Huning

Research Portfolio Manager ISS Research Integration Office NASA Johnson Space Center

International Space Station

Created by a partnership of 5 space agencies

10 years and over 100 missions to assemble

A laboratory for Microgravity, Earth Science & Space research at a scale that has not been achieved before and that no one agency or country could sustain

Creating knowledge that improves life here on earth and provides a steppingstone for humans to push further into space

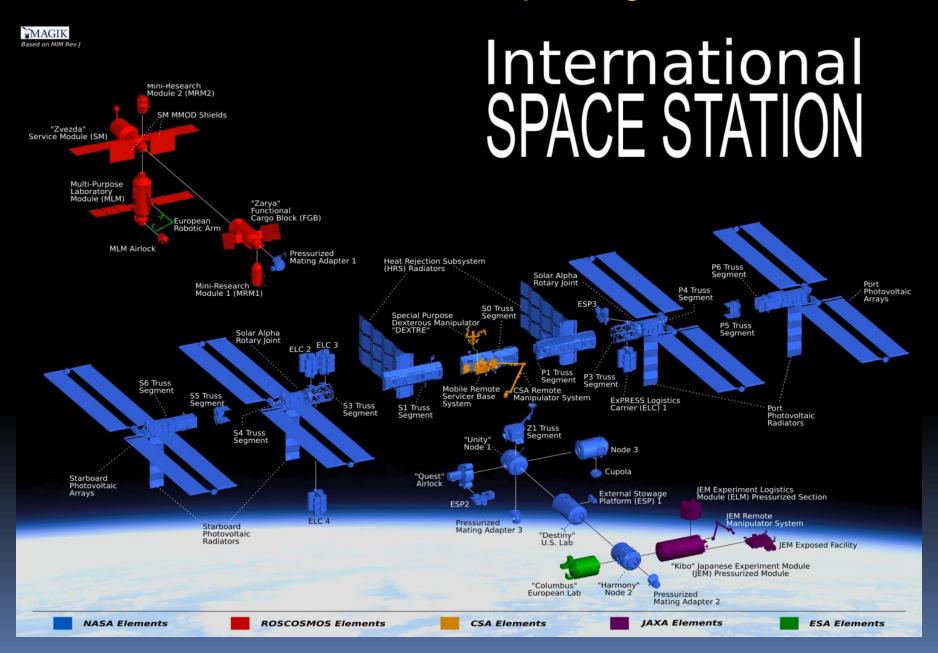

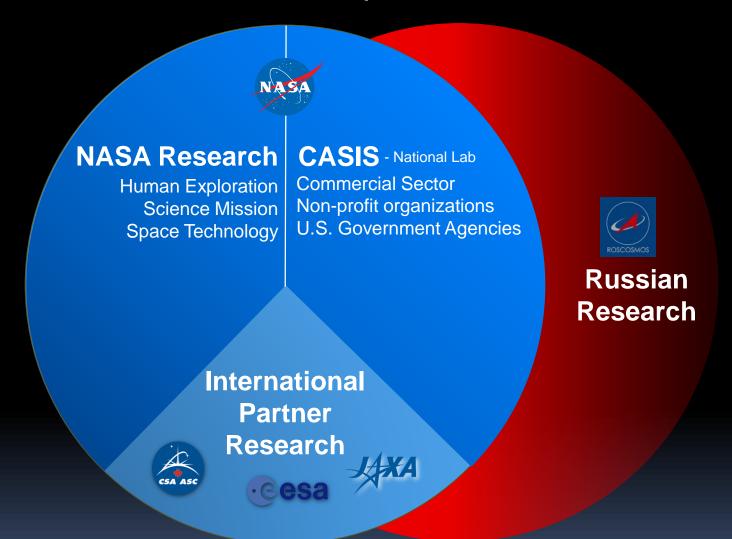

A collaboration of 5 space agencies

Research Sponsors on ISS

Biology and Biotechnology, Earth, Space Science, Educational Activities, Human Research, Physical & Material Sciences and Technology Demonstration

ISS Payload Philosophy

Our goal is to fly and operate a payload as soon as it is ready

To operate the ISS like a laboratory to enable the flexibility for investigators to adapt their research plan based on new and unexpected findings

To continue to make the integration and operation of payloads on ISS as simple and ground lab like as possible

International Space Station Key Features

- Sustainable microgravity and space research platform for long term studies
- External and internal research
- Permanent Crew presence
- Access to the vacuum of space
- Exposure to the thermosphere
- Earth observations at high altitude and velocity
- Automated, human, and robotic operated research
- Habitable controlled environment

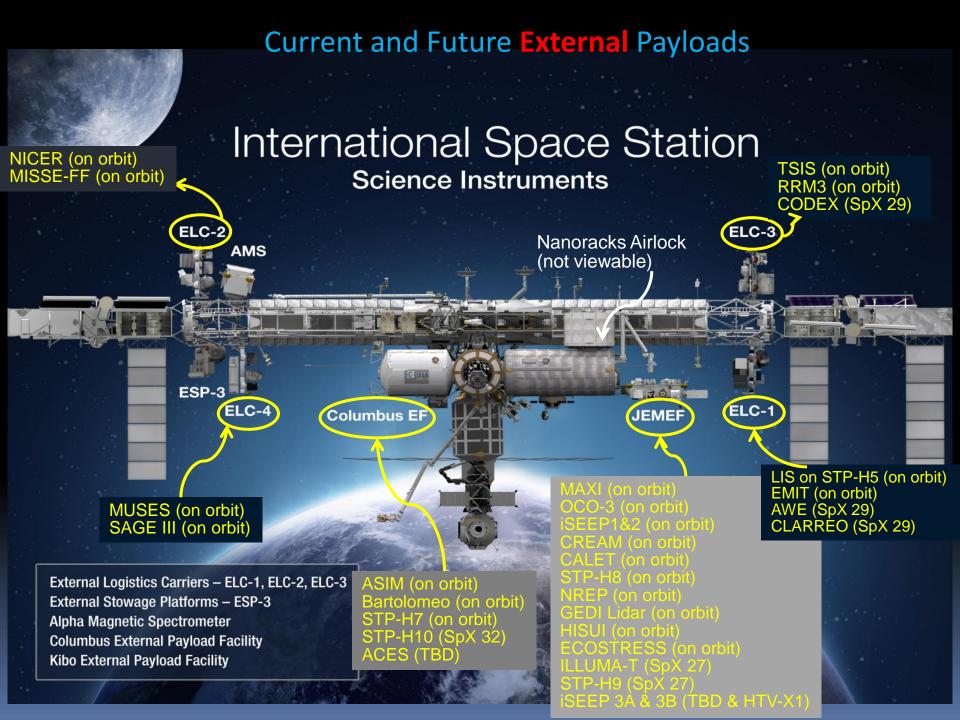

- Nearly continuous data and communication link to anywhere in the world
- Payload to orbit and return capability (for some external payloads)
- Modularity and maintainability built into the design ensures mission life, allows life extension, vehicle evolution and technology upgrades

President Biden signed CHIPS act, approving ISS extension to 2030

- International Partners on board with extending to 2030 and are working through the details to finalize with their Agencies / Government

 biden-harris-administration-extends-spacestation-operations-through-2030/
 - Video: https://www.youtube.com/watch?v=a-flzdifn54

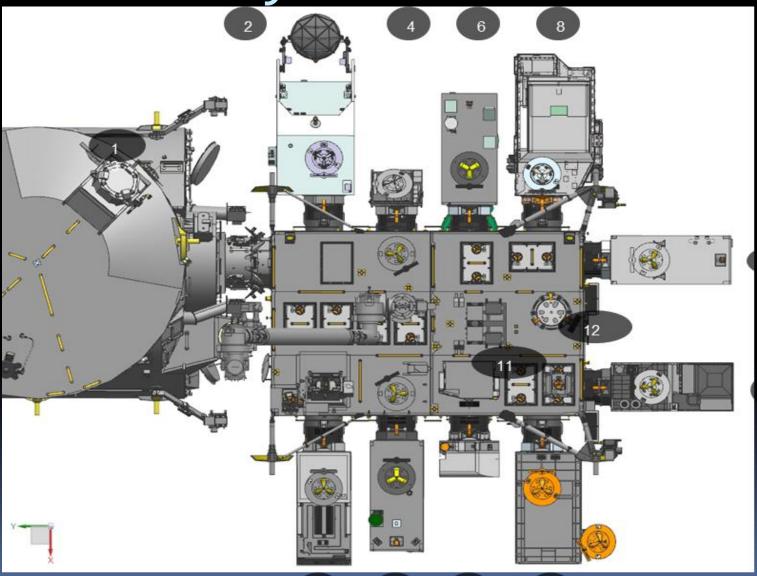

External Logistics Carriers (ELCs)

4 ELCs are attached to the ISS truss

- Each provide 2 payload sites – 8 total
- Port/Starboard & Upper/Lower locations
- Inboard / Outboard / RAM/ Nadir/ Wake / Zenith views
- Up to 34 x 46 x 49 inch payload volume

JEM EF Payloads and EFUs

Columbus Exposed Payload Facility

Year	SOZ	SOX	SDX	SDN	BTL
Past	SOLAR (↑1E, ↓NG-12)	SDS (↑SpX-13, ↓NG-12)	RapidScat (SpX-4:SpX- 13) ASIM (↑SpX-14)	HDEV (↑SpX-3, ↓NG-13)	BARTOLOMEO (†SpX-20)
2021			ASIM / STP-H7 (†SpX-24)	ASIM	m-NLP (†NG-17) (slot BCP 3)
2022			STP-H ₇	ASIM	m-NLP (slot BCP 3, TBD)
2023			STP-H ₇	ASIM (TBD)	
2024			STP-H ₇ / ASIM (TBD)	ASIM / ACES (TBD)	

4 FRAM based and 12 Gold-2 Payload sites available

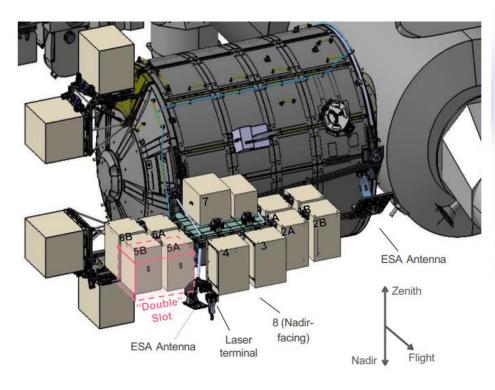

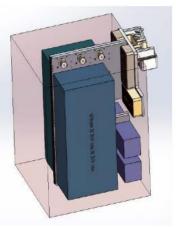

Bartolomeo (Commercial)

https://airbusus.com/leo-human-spaceflight-commercialization/

Payload Accommodation

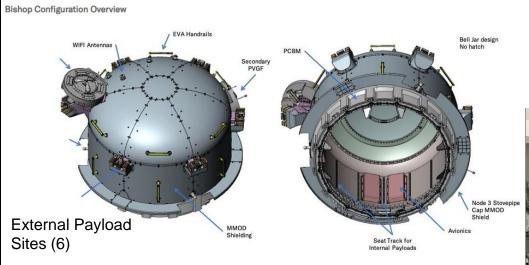

ArgUS Multi-Payload Adapter

- Up to 120 U on each side
- Can hold 10 separate payloads

Bishop Airlock (Commercial)

6 Gold-2 payload sites available

https://nanoracks.com/bishop-airlock/

Cubesat Deployers

JAXA and Nanoracks have demonstrated small satellite deployment from the ISS to offer more launch opportunities to small satellites.

ISS Visiting Vehicles

Dragon (SpX)

> Cygnus (Northrup Grumman)

HTV-X1 (JAXA)

NET: 1/2023

Dream Chaser (Sierra Nevada)

NET: 6/2023

Progress & Soyuz (Energia)

SpaceX Dragon Launch Vehicle

Space X Dragon Launch Vehicle

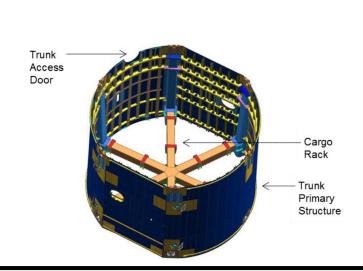

- The Commercial Resupply Contract (CRS) provides up-mass to ISS using the commercial Space X Falcon 9 rocket and Dragon spacecraft
- Dragon trunk utilized for unpressurized cargo (no return capability disposal only)
- Dragon Trunk Capacity is ~ 1700 Kg.
- Total Dragon cargo heater power is 300 watts (shared between payloads in the launch vehicle trunk)

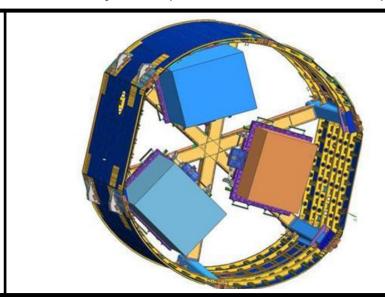

Dragon Disposable Trunk

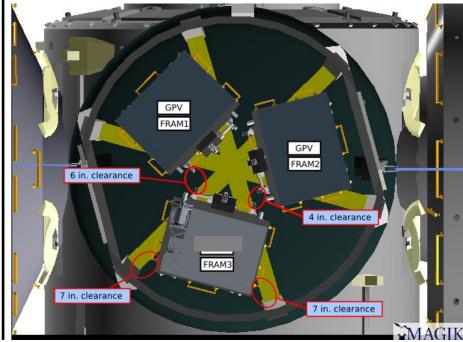

SpaceX Dragon External Payload Trunk FRAM Lay-out (CRS-1 trunk shown)

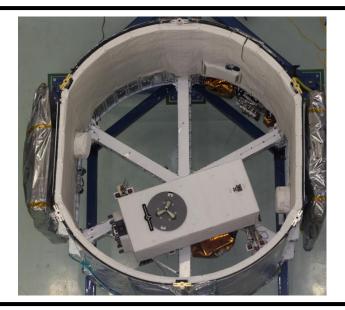

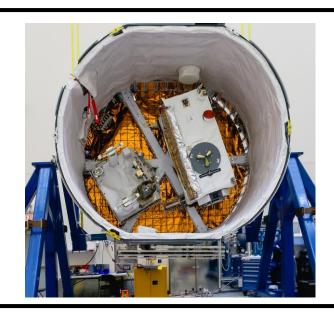

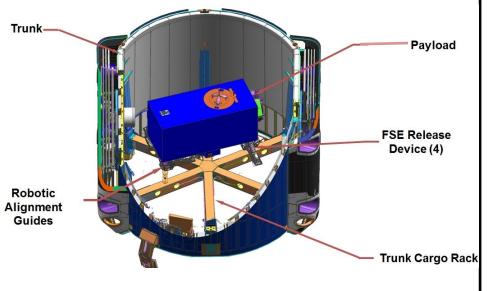

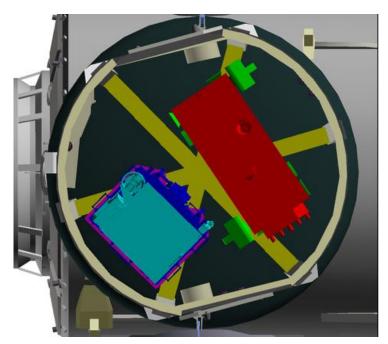

SpaceX Dragon External Payload Trunk JEM-EF Lay-out (CRS-1 trunk shown)

Launch and Installation (JEM EF Payload)

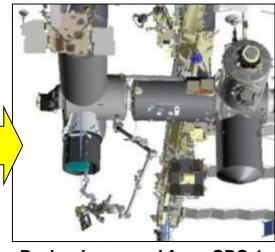

Dragon Launch

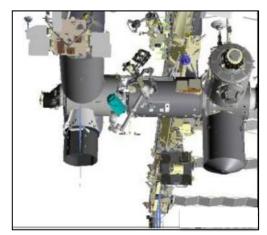

Dragon travels in lower rendezvous orbit for 1-3 days

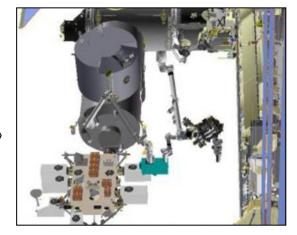

Dragon rendezvous and docks to Node 2

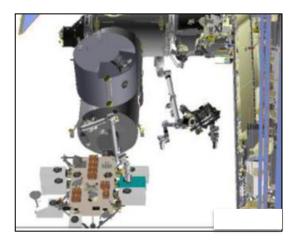

Payload removed from CRS-1 Dragon trunk by the SSRMS

Payload relocated to JEM External Facility (EF)

Payload handed off to JEM-RMS

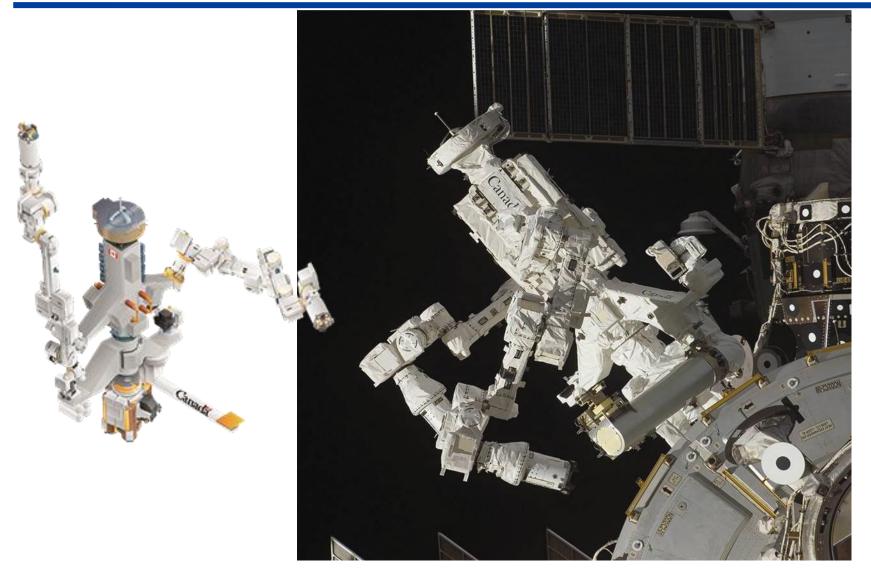

Payload berthed to JEM EF Unit

Special Purpose Dexterous Manipulator (SPDM)

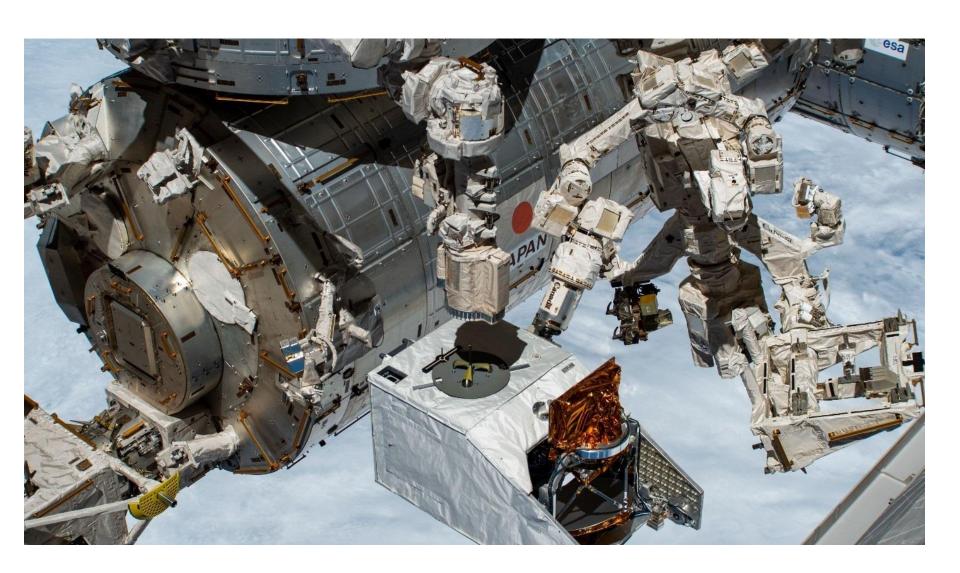

SPDM attached to SSRMS and used by the ground team or on-orbit crew to robotically install, remove and replace payloads and failed components

ISS Feasibility Assessment

- The ISS Integration Research office (RIO) will assess the payload needs to determine if they are compliant with ISS resources and meet standard interface requirements
- Nominal Data needed from Proposer Team
 - Payload Upmass (Include both instrument and ISS Interface Hardware
 - Volumetric Dimensions (both static and dynamic)
 - Power consumption (include peak power, on orbit and launch vehicle survival power)
 - Data rates (include any data latency requirements)
 - Pointing/viewing needs
 - Lifetime required on orbit
 - Instrument readiness date (date payload is ready to be turned over to the launch vehicle)
 - Return plan

Feasibility Assessment Process

- Contact the Space Station Research Integration Office (RIO) at the NASA Johnson Space Center to start a dialogue and arrange for a feasibility assessment telecon:
 - Steven Huning
 <u>steven.w.huning@nasa.gov</u>
 832.248.1034

- 2. Provide the Mission of Opportunity that your team is supporting, HQ Program Scientist (PS) and Program Executive (PE) names and your instrument technical information, such as:
 - Description of instrument concept and preliminary design approach
 - Estimate of launch/on-orbit mass, on-orbit volume/dimensions, power, data downlink requirements, need for cooling, and your preliminary assessment of possible ISS site locations for your proposed instrument
- 3. To complete the assessment several follow-up telecons, emails and data requests may be needed

Feasibility Assessment Process

- 4. ISS RIO will assess your design approach and let you know the suitability of your proposed design for accommodation on ISS. If your design has envelope exceedances, we will let you know possible options to resolve.
- 5. A draft feasibility letter will be generated and reviewed with the proposer team for comments. The letter is solely based on the information provided by the proposer at that time.
- 6. The final feasibility letter is signed by the RIO manager and provided to the proposer team
- 7. The entire process should take 6 to 10 weeks, depending on the complexity and maturity of the design from the proposer team
- 8. When a proposal is selected for funding, SMD will inform the ISS RIO via an Authorization to proceed (ATP), to start the integration process
- 8. An ISS integration team will be developed to support the integration process of that instrument on ISS. This team will help your team throughout the design, test, safety approval and verification, launch, and operations processes.

Payload Allowable Up-Mass & Volume Summary Table

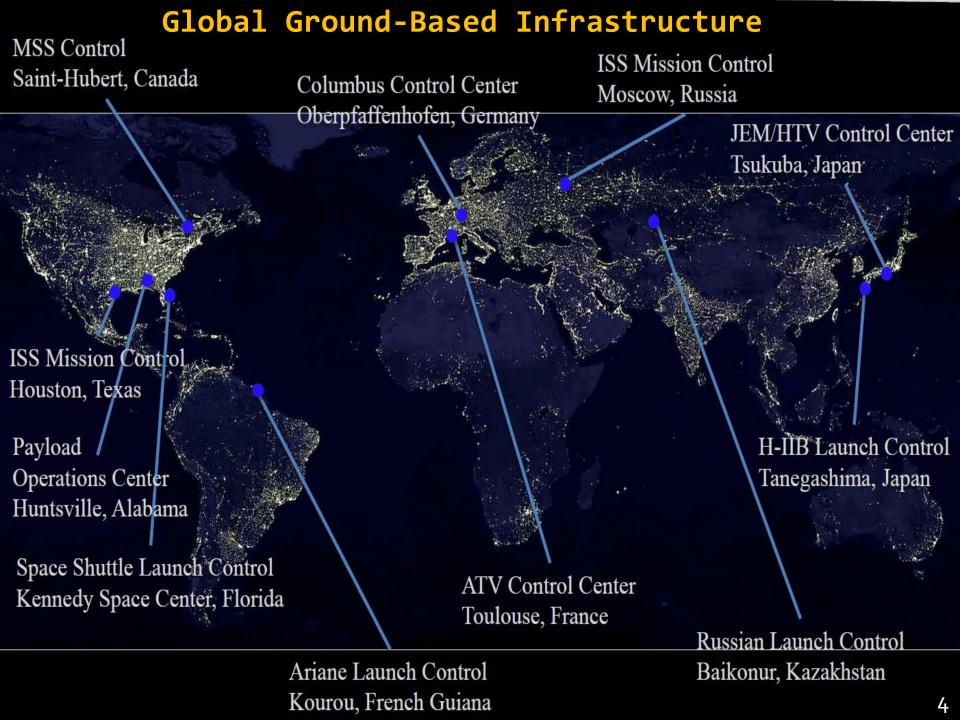

Attached Payload Location	Allowable Payload weight	Flight Support Equipment weight	Total Weight	Payload Volume (W x H x L)
ELC (ExPA)	500 lbs (227 kg)	250 lbs (114kg)	750 lbs (340 kg)	34 x 49 x 46 in (863 x 1244 x 1168 mm)
Columbus (CEPA)	521 lbs (236 kg)	250 lbs (114kg)	771 lbs (350 kg)	34 x 49 x 46 in (863 x 1244 x 1168 mm)
JEM EF (PIU)	981 lbs (445 kg) @ standard payload locations 5391 lbs (2445 kg) @ heavy payload locations	121 lbs (55 kg)	1102 lbs (500 kg) 5512 lbs (2500 kg)	31.5 x 39.4 x 72.8 in (800 x 1000 x 1850 mm)

ExPA: External Payload Adapter

CEPA: Columbus External Payload Adapter

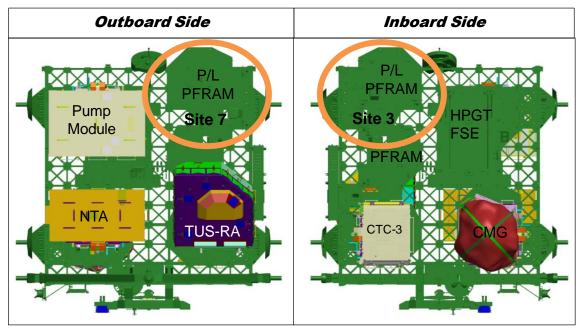

PIU: Payload Interface Unit

Flight Support Equipment Weight includes ExPA, CEPA, PIU, FRGF, electrical connector, handrails

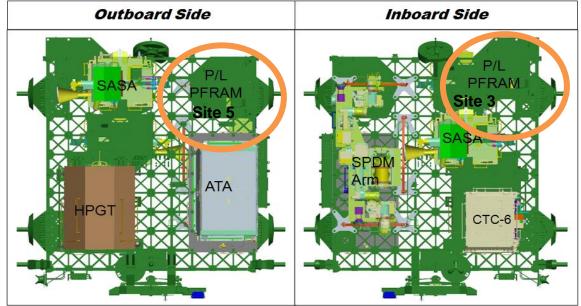

Express Logistics Carriers Overview

Payload Locations Circled

ELC-2 (Both Ram) Starboard upper 2 Zenith payload sites

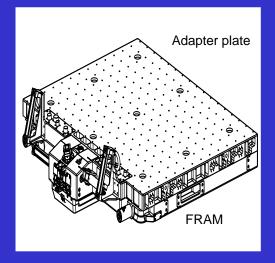

ELC-3 (3-Ram;5-Wake)
Port upper
2 Zenith payload sites

Express Pallet Adapter (ExPA) Assembly (GFE)

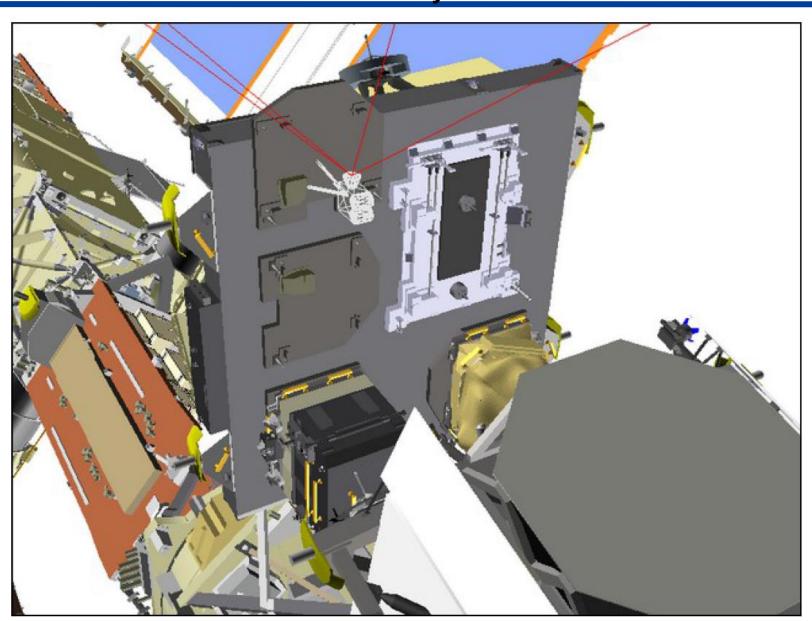

Express Pallet Adapter (ExPA) Assembly

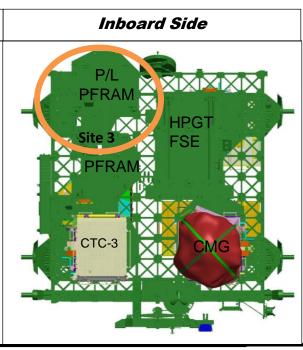

ExPA overall Mass	255 lb
ExPA overall dimension	46.05" x 47" x 13.06" (H)
ExPA payload carrying capability	34" x 46" x 49" (H) and 500 lb"
Payload electrical interface	Power(120VDC & 28VDC): Four NATC connectors Data (1553, Ethernet): Six NATC connectors
Payload thermal interface	Active heating, passive cooling
Payload structural interface	2.756" X 2.756" Grid with 250-28 UNF Locking Inserts and 1.625" diameter Shear Boss Provisions
EVA compatibility	EVA handrail provisions
EVR compatibility	All EVR interfaces on ExPA

Columbus External Research Accommodations

	Mass capacity	230 kg (500 lb)
Columbus External Resources	Volume	1 m ³
IXESOUICES	Power	2.5 kW total to carrier
		(shared)
	Thermal	Passive
		1 Mbps (MIL-STD-1553)
	Medium-rate data	2 Mbps (shared)
	Sites available to NASA	2 sites

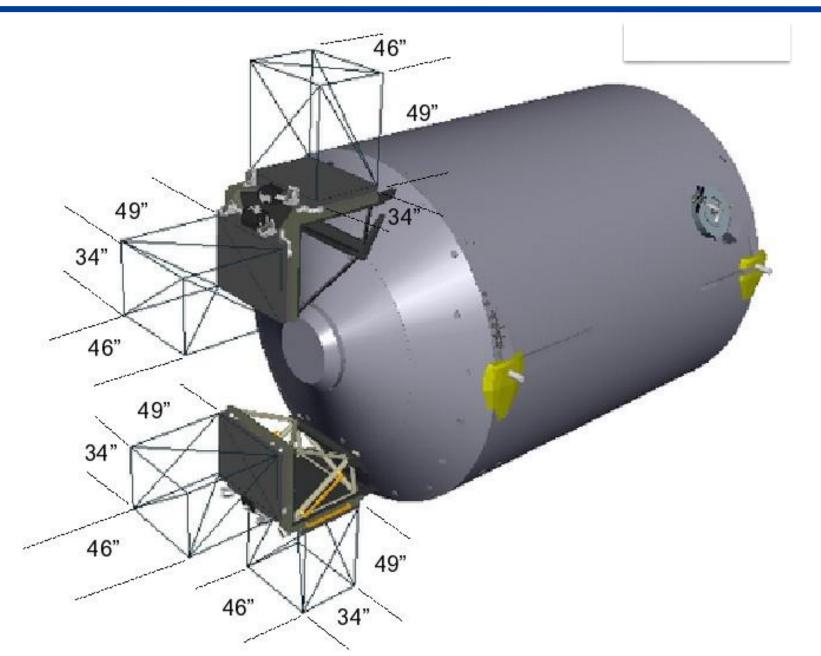

Columbus EF Overview

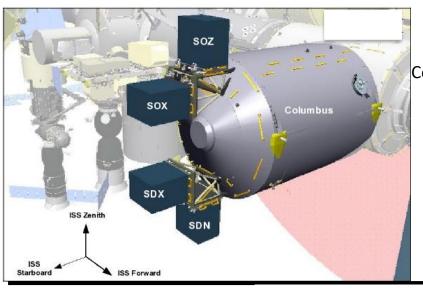

Location	Viewing	Payload Size	Power	Data
SOZ	Zenith		1.25 kW at 120 VDC	
SOX	Ram	226 kg +	2.5 kW	Ethernet,
SDX	Ram	CEPA	max	1553
SDN	Nadir		(Shared)	

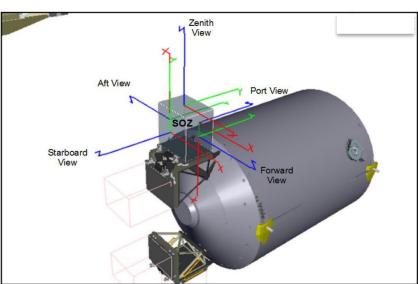

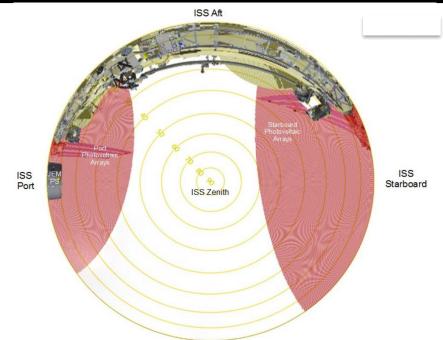

Columbus External Payload Envelope Dimensions

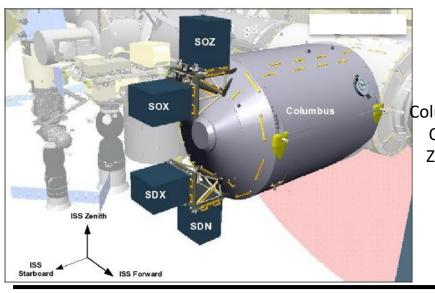

Columbus/S0Z Overhead Zenith site

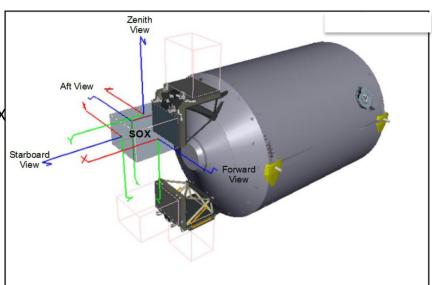

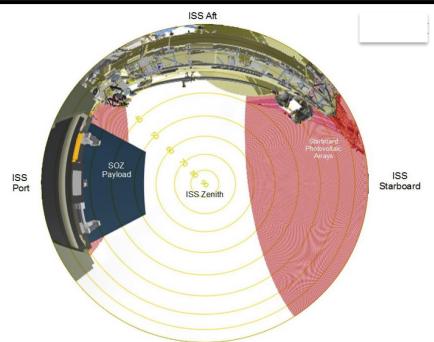

ISS Forward

Columbus/SOX Overhead Zenith site

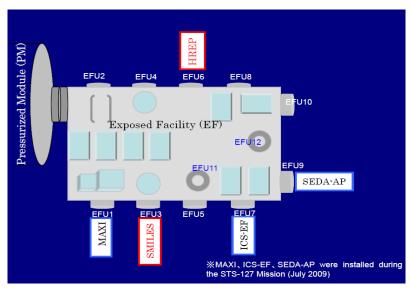

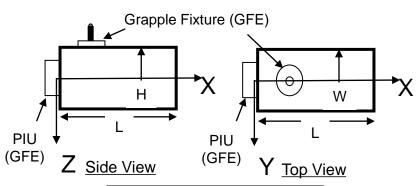

ISS Forward

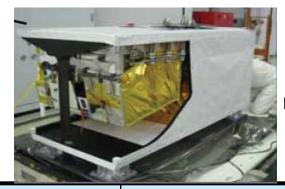

JEM EF External Research Accommodations

Axis	mm	ft	inch
W	800	2	7.50
Н	1000	3	3.37
L	1850	6	0.83

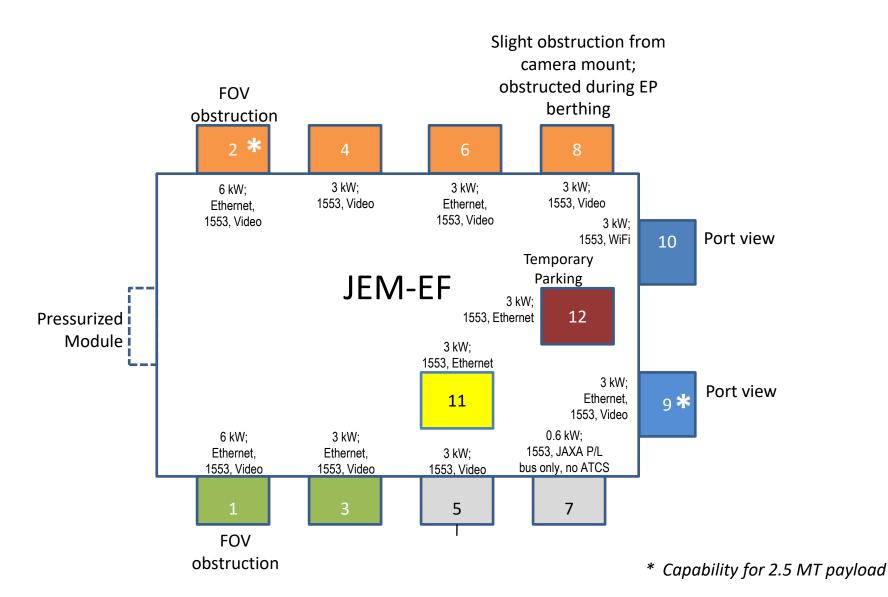

NASA/DOD HREP payload

Mass capacity	550 kg (1,150 lb) at standard site 2,250 kg (5,550 lb) at large site	
Volume	1.5 m ³	
Power	3-6 kW, 113 – 126 VDC (Shared resource)	
Thermal	3-6 kW cooling (Shared resource)	
Low-rate data	1 Mbps (MIL-STD-1553, two way)	
Medium-rate data	1EEE-802.3(10BASE-T, two way) *	
High-rate data	43 Mbps (shared, one way downlink)	
Sites available to NASA	5 sites	

- Ethernet bus is tested to 100BASE-T capacity.
- Upgrade to 100BASE-T is being worked by JAXA

JEM EF EFU Location Overview

ISSP Management JEM-EF Power & Flow Design Limit Directive

- Due to the JEM-EF system constraint to meet the external payload complement needs for power and fluid flow rate during the 2019-2024 timeframe to allow all of the payloads located on that platform to operate continuously at the same time, ISSP is directing PDs to design their instruments to perform within the limitation of the JEM-EF system capability in order to minimize payloads real time operation timelining
- *JEM-EF system can support the following resource utilization per payload during the 2019-2024 timeframe:
 - Maximum fluid flow per payload: 151 kg/hr
 - Maximum Power draw per payload: 500 W
 - Maximum accumulator volume: 2L

^{*} Deviation from these values above will significantly increase the likelihood of that payload complement to be timeline during real time operations of that increment, which means less continuous on-orbit operation of all the payloads in that increment at the same time

ISSP Management ELC Power Design Limit Directive

- Due to a design flaw uncovered recently in the ELC 28 dc power interface, which limits the Experiment Control Module (ECM) in the EXPRESS Carrier Avionics (ExPCA) to operate 40 degrees Celsius when two instruments are operating simultaneously on that ELC, the ISS Program recommends that all future ELC proposed instruments be designed to interface with the ISS 120 Vdc power interface.
- Payload Developers (PDs), however, still have the option to design their instruments
 to interface with the 28 Vdc power feed at the risk of that payload being operations
 constraint (timeline constraint) whenever the 40 degrees Celsius limit is reached,
 which will trigger a power shed situation to balance total power draw across that ELC.
 This is being done to prevent total loss of science operation on that ELC if the ECM
 fails. Current analysis shows that when two payloads operating on the ELC
 simultaneous and both are using the 28 dc power, the 40 degrees Celsius limit is
 reached faster compared to if one is using the 28 dc power and the other the 120 Vdc
 power interface.

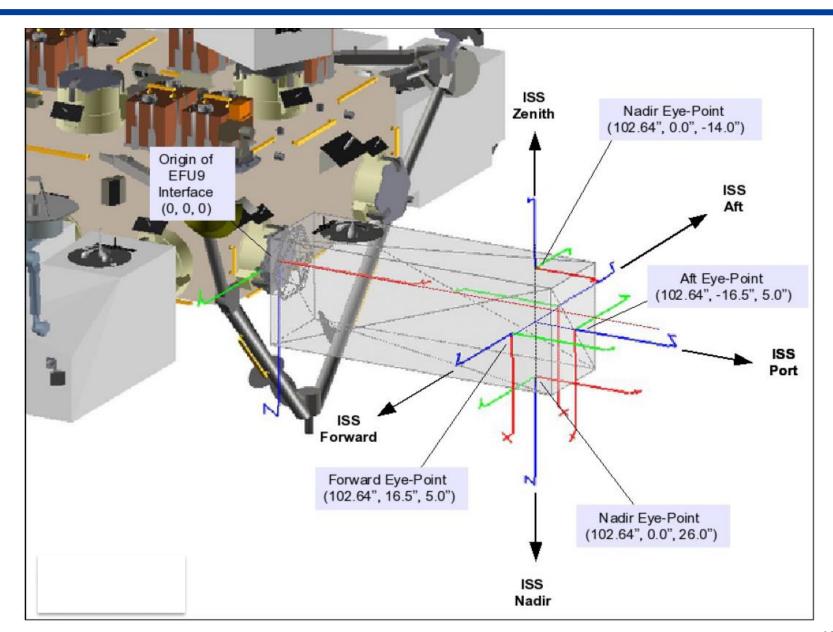

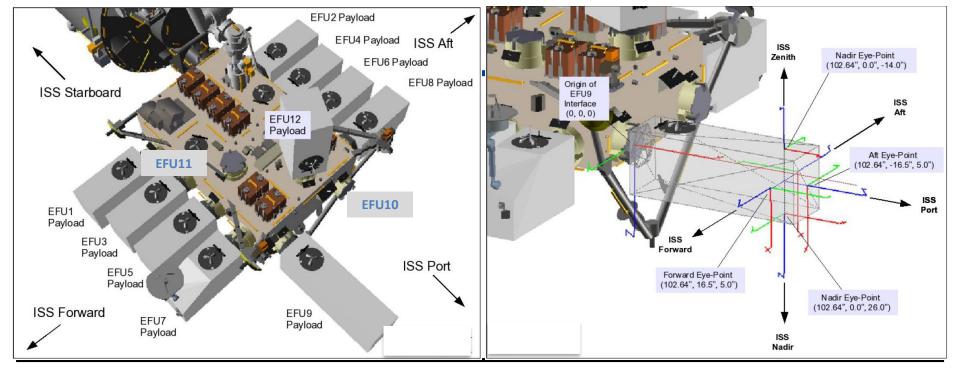

JEM-EF Detailed Accommodations by Site

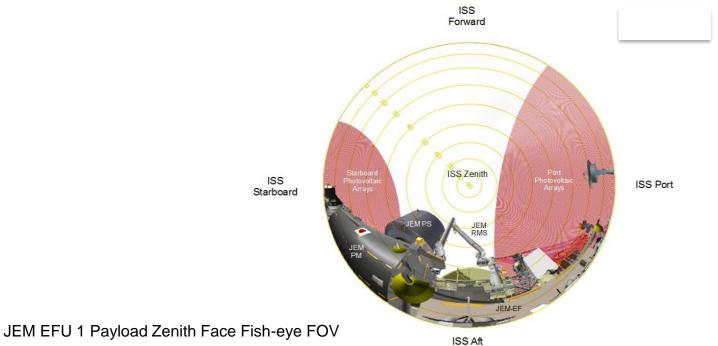

Location	Viewing	Payload Size	Description / Notes	Data
1	Ram, Nadir, Zenith	500 kg	Ram field of View (FOV) obstruction by JEM module	Ethernet, 1553, Video
3	Ram, Nadir, Zenith	500 kg	Clear view	Ethernet, 1553, Video
5	Ram, Nadir, Zenith	500 kg	Clear view	1553, Video
7	Ram, Nadir, Zenith	500 kg	Clear view	1553, JAXA P/L Bus
9	Port, Zenith, Nadir	2.5 MT	Best volumetrically for large payloads (up to 2.5 MT), but not necessarily the best viewing	Ethernet, 1553, Video
2	Wake, Nadir, Zenith	2.5 MT	Can hold large payloads, but has an FOV obstruction by JEM module	Ethernet, 1553, Video
4	Wake, Nadir, Zenith	500 kg	Clear view	1553, Video
6	Wake, Nadir, Zenith	500 kg	Clear view	Ethernet, 1553, Video
8	Wake, Nadir, Zenith	500 kg	Obstruction during EP berthing, slight obstruction from camera mount	1553, Video
10	Wake, Nadir, Zenith	500 kg	Port View	WiFi
11	Zenith only	500 kg	Good Zenith viewing	Ethernet
12	Zenith only	500 kg	Temporary stowage location	Ethernet
